Description

Clarification on the option to "Deposit all before stocking" I was just working on setting this up for the first time today for stocking cure pots for my teams, and ran into some confusion with the "Deposit all before stocking". I added it with every new potion entry i made to stock, with having that set to "TRUE" the list ran through and put the items back into the depot so at the end of the list nothing had actually been stocked. i figured out that i only needed that option on the first line of the list then it would empty all my cure pots and restock with the amount i wanted in my bags at all times.

I hope that i explained myself well enough for you to understand what i ran into, im not sure what the actual Enhancement might be maybe having that as an option not tied to an actual entry in a list.

Thanks.
