Category:			**Estimated time:**	0.00 hour
Target version:				
vbulletin_issue_id:				

Description

Currently eve sends pc-specific information to the login server, which could link multiple accounts.

Socks support and modifying login data would be nice.

Also it would allow multiple trial accounts to run simultaneously.

Red Guard already implemented this, it seems they send mac address, microsoft ProductID, and other hardware data.

History

#1 - 2014-10-07 01:06 PM - CyberTech

- Subject changed from Login data modification to Obfuscate PC tracking information

- Status changed from New to Accepted

This is already planned for a future release.
