I'm using this task as training fodder for a newbie. It's coming along fairly well. WinForms completely sucks to implement drag and drop in but we've got it working fairly well for single-item movement in a test project and will transplant it into StealthBot next time.

#2 - 2014-10-21 02:47 PM - Stealthy

- Status changed from In Progress to Resolved

Development and testing complete. This will be released with 0.9.3.9 soon as the build server is back up.
