uhh... what?

Are you talking about when it tells you why a spell wasn't cast? If so, turn that option off...

If you just want to see what the bot is casting, only select the top option, you won't have any spam from buffs, since it will only tell you when it cast it, not that it's already on.

It's not really worth me trying to change how the debug system works, as it would require adding additional checks. I could specifically for the message of "Probably means the buff is already on you." if the following does not work for you:

On the Settings tab, check "Disable CS\_Buffs"

If they are disabled, they won't show in the debug report.
