Description			
Using OgreHarvest I would like the ability to add multiple paths at one time instead of clicking one and then clicking the "Add Nav Path". Can you add a feature to either have a text box you can put in a prefix, for example if all of my navpaths started with TS_ that I could put in a text box TS_ and you could loop through and add all the points to the nav list and/or the option to shift/ctrl in the drop down.
