Description

I would like to see instead of using the BJ Mapper to have a button that will add the current location when clicked to the loc. list box. I use single entry points a lot and do not use the continuous logging, meaning my list box does not contain 1,2,3,4,5 but rather 1,4,7,10, etc., which means I have to delete a lot from the list box to have it list the locs I exactly want in my run locations.

History

#1 - 2015-07-05 06:03 PM - bjcasey

- Status changed from New to Implemented

Coming with Patch #115:

Added a new button that will add your current location to the run point to point navigation route.
