<b>Description</b>			
<p>The ability specific targets based on group number, or class, archetype etc.</p> <p>For example, in an x4 i might want to set my healers to help out with other groups so id use @raid as target for a heal. But if I do this on all healers, they may all try to heal the same target while 3 or 4 other characters are still low health and not being healed. So it'd be cool to have G1 healers set to help heal G2, G2 healers set to help heal G3, etc.</p> <p>Or maybe I want to set my healers to only rez dirges, and have dirges rez everyone else. right now I can do this by having 4 dirge aliases, and 4+ cast stack entries, but would be cool to set target to @Raid-Dirge or something.</p>			

### History

Update, a solid example would be if you wanted to set up a cure so that it would cast on any healer in the raid, but you didnt want it to cast on any random person in the raid, just healers. Instead of creating 8 aliases, you could just set target as @RaidHealer
