| <p>It seems ISXIM does not detect if you are still connected the server or you lost connection. I was doing some testing and my internet connection dropped. I noticed no error was thrown. So ran ircsample2.iss to see what IRCUser was reporting and it showed that I was still connected to the server, in the channel and with users in that channel. IsConnected reports TRUE and IsConnecting reports FALSE. This also held true if I pulled the cord, disabled network adapter or blocked the IRC incoming port. Didn't know if this was intended or not. The search I ran didn't turn up any hits on lost connection. So I figured I would say something.</p> |        |  |
