Description

Currently, I have my hauler hard-wired to take X-amount of time to rest if there are no jetcans in the field where my alts are. I believe this would be better suited to a custom menu option, however.

Allow the user to input a custom rest period into a text box in seconds. Later down the road, you could even set it to rest until X ammount of full requests come in, possibly even allow the bot to do the "miner full" to "jet can full" request math in background and reduce it to a simple "standby until needed" checkmark.
