Description		
<p>When the ogre hireling opens up the housing & leaderboards window, the guild name is entered into the filter, the guild name entered doesnt show up in the list. I have to manually enter the guild name and then hit enter for each guild for the hireling to complete the script.</p> <p>There is no error in the console window. The script doesnt timeout. This has been happening for about a month or two, since the mass bans.</p>
