Description

When in a station, you are given the option of right clicking the pilot in the Guests window or their portrait in the local chat window.

One of the options is: Trade

This opens a dialogue window that has a title of: Trade with PlayerName

You can tell that this window is open by echoing: `echo ${EVEWindow[ByName,"tradeWnd"]}(exists)}`

Below is a poorly documented example of what I mean.

EVE-TradeToPilot.PNG

1 - Your pilot name is displayed.

2 - Your trade partner's pilot name is displayed.

Green Arrow shows that the pilot has accepted the trade.

Teal - Any items that are part of the trade. Each pilot has it's own option.

What I would like:

- 1) Method to add an item to the trade window.
- 2) GetTradeItems method to read the item info for both myself and my trade partner's items.
- 3) Read if the partner has accepted the trade.
