Description

Hi, I was chatting to bj and he said to post my crash log and and he would discuss with kannkor. Everytime I run try running from the console bj zi setup or bj help it crashes. bj confirmed I was running correct version of innerspace and isxbj.

Crashlog for bj help is http://pastebin.com/gtECsiFY

I can't generate a crashlog for bj zi setup, it simply defaults to the windows EQ2 App has stopped working window.

- Status changed from New to Resolved

Spoke with Bj and he fixed this a few days ago. If you are still having issues let us know.
