Description

I am trying to do an heroic version of OtisTaylor Solo script for Arcanna'se Spire Forgotten Sanctum.

I start by taking the 100 - Solo Instance Run - Arcannase Spire Forgotten Sanctum (Solo) - By Otistaylor.xml file and change iniside the line :

<Setting Name="Step-1">(1) C: |QuestBot: Author_Message| P1: |Revision: 1 - Does not collect shinies.|</Setting>

by <Setting Name="Step-1">(1) C: |QuestBot: Author_Message| P1: |From Otistaylor solo - Version 1|</Setting>

    <Setting Name="Step-2">(2) C: |QuestBot: Confirm_ZoneName| P1: |All| P2: |Arcanna'se Spire: Forgotten Sanctum [Solo]|</Setting>

by <Setting Name="Step-2">(2) C: |QuestBot: Confirm_ZoneName| P1: |All| P2: |Arcanna'se Spire: Forgotten Sanctum [Heroic]|</Setting>

And I save the file as 100 - Heroic Instance Run - Arcannase Spire Forgotten Sanctum (Heroic) - By ethreayd.xml

I launch Innerspace with 7 sessions, the last one has "ogre hirex 0 -all" running with another toon that has nothing to do with my group.

I enter with my crappy group in the instance, BJ CM is running, as well as classic BJ stuff like AFK, nothing fancy

I launch QB everywhere with "relay all BJ questbot"

I got some window from loot options, default method is None, I validate that. My settings in QB is Leader Only for All loots. Everything else is by default. I have navigation debug enabled.

On my main, I select the xml file that I just made and start task. Everything go well until my crappy group get wiped and revive.

Now if I stop task and start task, it shares quest but stay stuck, no task are done. Only a full shutdown of all sessions and EQ2 windows will fix the issue.
