Description

I would like to be able to select Read when right clicking on a book from inventory.

A book to test with can be found in the mage tower in Qeynos. Take the yellow portal and then on a table behind Indis Surion there is a book you can click (The Words of Zebuxoruk).

When you right click the book in inventory, the context menu options are (from top to bottom): Examine, Read, Destroy

I would like to be able to select Read.

* Added new METHOD to the 'item' datatype:

1. Read (Note: This method will do nothing if the item cannot be 'read')
