Description

When you are casting a spell, you may want to make a decision about it depending on what buffs you have up (or are missing)

Implementation suggestion:

1) add a "text box" where the user can type the name of a buff

2) add a flag/drop down so the user can specify one of

- requires buff on me
- requires buff to be missing on me
- requires buff on target
- requires buff missing on target

note: you could possibly use the same "text field" as in forge issue [#2060](#)

ex: Fury right hand side Prestige, buff "Energy Vortex" will decrease the cast time of Starnova, causing you to want to cast it earlier than normal in your cast stack when the buff is up

History

Is "TimeWarp" a buff we can check on this way?
