Description			
You may wish to only pre or post casts spells depending on where in your cast stack a spell was triggered from.			
Implementation suggestion:			
1) add a "text box" called PrePostTag to a CastStack entry			
2) add the same "text box" to the Pre/Post cast lists			
3) when you look for pre/post casts, if the "text box" PrePostTag was populated on the CastStack entry, only fire pre/post casts with the same tag			
My Bad Example:			
<ul style="list-style-type: none">• CastStack: Etherflash, required #5 targets, PrePostTag: Multiple• CastStack: Etherflash, required #1 targets, PrePostTag: Single• PreCast: Etherflash => Spellbind, PrePostTag: Multiple			
Idea, only pre cast spellbind when you are going to use etherflash on a lot of targets
