Description			
<p>When in a fleet you have the ability to launch your drones, then assign them to someone else to control.</p>			
<p>To do this ingame, you would join a fleet with at least 1 other person, Launch your drones, right click the "Drones in Space (5/5)" you will then see an Assist flyout menu. hover this, and it will then let you select who to choose. From this point forward, that person will control your drones.</p>			
<p>Note: In large fleets (i don't know the breakpoint) it will create an extra level of menu for pilots a-g, h-n etc.</p>
