

Inner Space - Bug #6

Change default install folder to be Windows Vista+ compliant

2013-09-25 02:59 PM - CyberTech

Status:	Rejected	
Priority:	Normal	
Assignee:		
Category:		
Target version:		
vbulletin_issue_id:		
Description		
Patching, editing scripts, dropping SVN repos into the Innerspace directory when it's installed in %PROGRAMFILES% can be a pain, requiring permissions changes to the folders, and much user questions.		
If IS installed to a Vista+ compliant dir, like ProgramData\Lavishsoft\InnerSpace, then this issue will not occur.
