

ISXEQ2 - Bug #1184

Crash with Effects

2014-09-27 02:44 PM - Multicharacter

Status:	Resolved
Priority:	Normal
Assignee:	Amadeus
Category:	Crash
Target version:	
vbulletin_issue_id:	
Description	
<p>When trying to see what Effects are on something it results in a crash to desktop along with a crash report from Innerspace that has the following:</p>	
<p>Extension: isxeq2.dll Extension Crash Info: Crash unhandled by custom extension Inner Space: Inner Space Kernel 1.13 Build 6030 (Mon Sep 15 04:00:23 2014) Crash: 0x16205632: Exception 0xc0000005 reading from address 0x0000000A in module isxeq2.dll</p>	
<p>Extension: isxeq2.dll Extension Crash Info: Crash unhandled by custom extension Inner Space: Inner Space Kernel 1.13 Build 6030 (Mon Sep 15 04:00:23 2014) Crash: 0x165F5632: Exception 0xc0000005 reading from address 0x0000000A in module isxeq2.dll</p>	
<p>Extension: isxeq2.dll Extension Crash Info: Crash unhandled by custom extension Inner Space: Inner Space Kernel 1.13 Build 6030 (Mon Sep 15 04:00:23 2014) Crash: 0x16075632: Exception 0xc0000005 reading from address 0x0000000A in module isxeq2.dll</p>	
<p>Each one of those was from a seperate crash. It seems to happen when you're trying to see effects on things. Eg, one crash reported <code>{Me.ToActor.Effect[nameofeffect](exists)}</code> another reported a crash with <code>{Me.Group[groupmate].ToActor.Target.Effect[effectname]}</code>, another crash reported <code>{Me.Group[groupmate].ToActor.Effect[effectname]}</code>.</p>	

History

#1 - 2014-09-27 03:41 PM - Multicharacter

It REALLY didn't like "echo `{Me.ToActor.Effect[effectname](exists)}`" typed into the console - seemed to go into a loop and started launching hundreds of instances of notepad (faster than they could load with text).

#2 - 2014-09-27 05:02 PM - Amadeus

- Status changed from New to In Progress

- Priority changed from Normal to High

Looks like they're all crashes/bugs with actor.effect ...I'll look at it tonight.

#3 - 2014-09-27 08:48 PM - Amadeus

- Status changed from In Progress to Closed

This will be fixed with the next release. I've confirmed that ID and Name are working; however, someone with some records may need to make sure that MainconID and the other members of the actoreffect datatype are correct.

#4 - 2014-09-29 06:35 PM - Multicharacter

It seems crashing with `{Me.ToActor.Effect[nameofeffect](exists)}` still happens, not every time like it was originally, but still just ever so often it causes a crash to desktop with the Innerspace error window popping up pointing to the last command always being a look up of an effect.

#5 - 2014-09-30 12:35 AM - Amadeus

- Status changed from Closed to In Progress

LavishScript Execution Stack:

\${Me.Group[3].ToActor.Effect[Hatred From the Grave](exists)}
\${Me.Group[3].ToActor.Effect[Hatred From the Grave](exists)}

Running Scripts:

healer

#10 - 2014-10-02 12:50 PM - Amadeus

I see where it's crashing, but not why. I double-checked everything and it just seems like at that point in time, the actor you're checking didn't have a valid pointer for it's actor effects. It LOOKS like a crash that would occur with ANY access to actoreffects, which makes it odd that it's happening randomly.

Was there anything odd about Group[3]? Was that group member out of range, dead, linkdead, or anything else funky?

Can you write a short simple script to spew the effects from all your group members and see if you can find some pattern to when/what causes the crash?

#11 - 2014-10-02 09:15 PM - Amadeus

I believe that verison 20140923.0028 should fix everythinng with regard to this issue. If so, please confirm by replying to this issue and I'll close it.

#12 - 2014-10-03 07:41 PM - Multicharacter

Didn't seem to have this crash today, so it looks like it is either fixed or happens much more infrequently.
