Description

when event: IRC_NickJoinedChannel(string User, string Channel, string WhoJoined) fires. It seems the User is always returning the same User, even if two users are connected.

IE: I had Kannkor_IRC1 and Kannkor_IRC2 connected. This event would fire twice for Kannkor_IRC1, but never for Kannkor_IRC2.

When I disconnected Kannkor_IRC1, Kannkor_IRC2 fired once (correctly).

I then re-connected Kannkor_IRC and things start... going odd. It's now firing twice per user.
