Description	
I'm trying to detect if the zone window is being displayed.	
	On the docks in Thundering Steppes. Location: -459.642670,-18.375893,-418.585663
	The new fabled dungeon door.
	With the Select Destination window up.
	Error:No such 'EQ2UIElement' member 'IsVisible' @\${EQ2UIPage[popup,zoneteleporter].Child[list,zoneteleporter. destinations.DestinationList].IsVisible}
I am asking for the member to be added or a way for us to detect if a specific UI element is visible to the client.	

History

- Status changed from New to Implemented

This is implimented as part of version 20160628.0004. EQ2UIElement is now known as eq2widget, and it has a new member: "GetProperty". One of the available properties is "Visible" (the full list of properties is in the changes file.)

So, using your example: `${EQ2UIPage[popup,zoneteleporter].Child[list,zoneteleporter.destinations.DestinationList].GetProperty[Visible]}`
