<div>Description</div> <div>I try to use the check option in quest_journal_info hoping that it will behave like confirm_zone. It seems not to (or I did not understand how to configure it).</div> <div>Is it possible to add such option. The goal is to make a queue file of all the TS quests and launching it automatically at boot. If TS quests had already be done and are not available, we want QB to pass the script and go to the next. Adding this quest_journal_info option will do just that.</div>
