

BJScripts - Bug #1914

Miners don't jettison ore when they're full

Description	
<p>Having an issue with miners not jettisoning cargo when they're full. Everything starts off working as intended, but eventually (usually within 30 minutes), a miner will stop jettisoning ore and continue to try to mine to a full ore hold. I can fix this by recalling all mining drones, unlocking all targets and shutting down the mining lasers. I manually jettison the ore, collect it with the Orca and shut down Astrobot. When I restart Astrobot, everything runs well again for about 30 minutes, then the bug reappears. Unfortunately, this bug prevents the bug from being run AFK for very long.</p>
