Description

Please fix the following isues:

- Issue: Orca Start boosting at the station
  - Please make it Start to boost at the belt and,
  - after the command for the bots to warp to master

- Issue: Orca Picks an asteroid and slow boat to it.
  - There are a couple of ways to go here.
  - 1 - Get the miners in belt and mining while the orca slot boat (miners to follow orca) OR
  - 2 - Orca Stay Stationary at the belt warp in (each miner can be configured on how far to slow boat already

Thanks a lot!

History

3 - Please add UI field for the user to define a timer "in seconds" between boost activation.

WHY: Because the module cycle is 60 seconds BUT the boost duration can last up to 130 seconds.

#2 - 2020-05-11 10:10 PM - CyberTech

- Project changed from ISXEVE to EVEBot

- Category changed from broken feature(s) to Broken Feature(s)
