

ISXEVE - Bug #2207

CreateBookmark can not create a shared location bookmark

2022-04-24 10:18 PM - Elusif

Status:	Implemented
Priority:	Normal
Assignee:	
Category:	
Target version:	
vbulletin_issue_id:	
Description	
Wrecks.TargetList.Get[1]:CreateBookmark["\${Config.SalvagePrefix} \${EVETime.Time.Left[5]}", "", "Salvage", 1]	
This would, in times past, create a bookmark with a name of [insert prefix] and [the current time converted to 24hrs, in a shared bookmark folder called "Salvage", with a duration of 3 hours.	
When Cybertech had the test build up this feature was fixed. Cybertech has gone AWOL for more than a year so it might be time for this to be fixed in the normal build of isxeve.	
<ul style="list-style-type: none">September 13, 2020 [20200909.0003] (TEST)<ul style="list-style-type: none">* Patcher will now patch before authentication* Fixed crash that could happen on load with invalid isxeve.xml* Entity.Mine fixed; now does the same as Entity.MineRepeatedly.* Improvements to Module.IsActive and Module.IsDeactivating* Module.CurrentCharges now returns 0 if there are no charges in the module, instead of null.* Module.Volume now returns 0 on error, instead of null.* Module datatype methods will no longer be called if not in space, as we abort earlier.* Modified the "CreateBookmark" METHOD of the 'eve' and 'entity' datatypes to accept a shared folder name as the 3rd parameter, in addition to the corp shared folder name CreateBookmark[<label>,<optional notes>,<optional folder>,<optional expiry>] Note that the otherwise optional 2nd and 3rd parameters must be specified in order to provide the 4th. ## ## EXAMPLE: EVE:CreateBookmark[MyLocation,"","", 1] ## Empty description, personal folder location, 3 hour expiration ## EXAMPLE: EVE:CreateBookmark[MyLocation,"This is my Location","Corporation Locations", 1] ## Create a bookmark named MyLocation, with a description of "This is my Location", in the Corporate shared folder (named for and owned by your corp, if your corp existed pre-2019 Shared folder change in EVE) ## EXAMPLE: EVE:CreateBookmark[MyLocation,"This is my Location","Bongos Shared Folder", 0] ## Create a bookmark named MyLocation, with a description of "This is my Location", in the shared folder "Bongos Shared Folder", with no expiration. ## NOTE - Shared folder must already exist, and you must have USE or higher access to the folder, or creation will fail.	
Don't think I need to add any sample scripts to this, it is a base feature of isxeve with straightforward usage.	

History

#1 - 2022-04-26 07:15 AM - Elusif

It just dumps the bookmark into Default Locations.

#2 - 2022-05-14 12:01 AM - Amadeus

- Status changed from New to Implemented

May 14, 2022
[20220510.0011]

* Modified the "CreateBookmark" METHOD of the 'eve' and 'entity' datatypes so as to use the following syntaxes:

```
- CreateBookmark[<label>]
  :: Creates bookmark in the first available PERSONAL folder
- CreateBookmark[<label>,<notes>]
  :: creates bookmark in the first available PERSONAL folder
- CreateBookmark[<label>,<notes>,"corp"]
  :: Creates a bookmark in the first available shared CORP folder for which you have appropriate access
- CreateBookmark[<label>,<notes>,"Corporation Locations"]
  :: Creates a bookmark in the first available shared CORP folder for which you have appropriate access
(FOR LEGACY SCRIPTS)
- CreateBookmark[<label>,<notes>,<folder name>,<optional expiry>]
Notes:
  - If you don't care about adding <notes> to the bookmark, you can just use a blank string for the
parameter (e.g., "")
  - Using a blank string for <folder name> (i.e., when wanting to specify <expiry>) will cause the
bookmark to be created
  in the first available PERSONAL folder.
  - The 4th parameter, expiry, is optional. Accepted values are:
    0: Never (Default)
    1: 3 Hours
    2: 2 Days
  - When using <folder name>, it must exist and you must have PERSONAL, USE, MANAGE or ADMIN access to it.
Otherwise, the
  method will return false without sending anything to the server.
##
##      EXAMPLE: EVE:CreateBookmark[MyLocation,"This is my Location","Bongos Shared Folder", 0]
##      Create a bookmark named MyLocation, with a description of "This is my Location", in the folder
"Bongos Shared Folder",
##      with no expiration.
```
